

Goppo Guro

Website Redesign — Super Prompt

"Play, Paper, and Pause"

Project	Goppo Guro Social Business Website
Document	Implementation Super Prompt for Claude Code / VS Code
Version	2.0 — Social Mission Edition
Status	Ready for Implementation
Based on	PRD.md + CLAUDE.md + Social Business Context

This document is the complete implementation brief for rebuilding the Goppo Guro website. It covers the mission context, creative direction, full site restructure, all new pages, and quality standards. Give this file to Claude in VS Code along with CLAUDE.md and PRD.md to begin the full implementation.

A social business for child development, women empowerment & education in Bangladesh

Understand the Mission First

Goppo Guro is not a lifestyle brand. It is a social business — a for-purpose organisation that uses origami, storytelling, and handcrafted paper experiences as vehicles for measurable social change. Every design decision, every word, every interaction must reflect that. The website is not a brochure. It is a mission delivery tool.

FOR CHILDREN	FOR WOMEN	FOR COMMUNITIES
Creative learning through origami & storytelling 4P Framework: Projects, Passion, Peers, Play Goppoguro Studio: after-school creative hub Golpoka Club: adventure-activity books SDG 4: Quality Education	Women artisans hand-fold every Little Joys jar Flexible, dignified income on their terms Every purchase directly funds a livelihood SDG 1: No Poverty SDG 5: Gender Equality SDG 8: Decent Work	Sales fund children's education School collaboration network A creative economy rooted in local craft SDG 12: Responsible Consumption Franchise model for community expansion

THE CHAIN: A visitor buys a Little Joys origami jar → a woman artisan earns flexible income → a child's education is funded. This chain must be made viscerally clear on every page that touches products or impact. One purchase = one artisan earns + one child learns.

Impact Principle: Story → Impact → Product → CTA

On any page touching the social mission, visitors must feel the human impact BEFORE the product is sold. Never lead with the product. Always lead with the person.

Step 0 — Read Everything First

Do not write a single line of code until you have fully read every file listed below. Build a complete mental model of what exists before changing anything.

CLAUDE.md

Project conventions, tech stack, CSS variables, JS patterns — absolute constraints

PRD.md

Full redesign specification — your implementation blueprint for every page

All .html files

Every existing page: content, nav structure, copy, component patterns

styles.css

Every CSS variable, BEM component, and design token

script.js

Every `init*()` function, its purpose, and its DOM dependencies

goppoguro images/

Every available photograph — know what you have before designing

hero animation/

The 74 JPEG canvas animation frames for the homepage

.agent/rules/guide.md

Always-on coding rules for this project

After reading, answer these questions before writing code:

- What content already exists that can be reused or elevated?
- What images are available and where should they go on each page?
- What is the emotional story arc from first visit to conversion?
- Which pages need new content vs which just need restructuring?
- Where does the social impact story currently live and where should it live?

Creative Direction

The site should feel like opening a beautifully handmade book — tactile, warm, considered. Like a Bangladeshi grandmother's hands folding paper into something that made you gasp as a child. Not corporate. Not startup. Not NGO-bland. Quietly extraordinary.

Reference Points

- **Aesop** — restraint, monochrome luxury, every word chosen
- **Kinfolk** — editorial warmth, slow living, generous white space
- **BRAC** — Bangladeshi social impact credibility and authenticity
- **Paperchase** — craft joy, paper culture, tactile design language

Color & Texture

- Strict monochrome-luxury: blacks, warm off-whites (#FAF8F5 territory), soft grays
- Never introduce bright colors — the monochrome is intentional brand identity
- Add subtle CSS paper grain to heroes: SVG feTurbulence noise filter at 3–4% opacity
- Images: grayscale(15%) default → grayscale(0%) on hover — warmth as invitation
- All colors via CSS variables ONLY — never hardcoded hex or rgb values

Typography Rules

- Cormorant Garamond: ALL headings — use LARGE (clamp(2.5rem, 6vw, 5rem) for H1)
- Generous line-height (1.1–1.2) for headings. Let letters breathe.
- Inter: all body copy. Max 65ch line length. 1.7 line-height.
- Outfit: all numbers, stats, impact figures — make impact feel weighty and real

Spacing Philosophy

Be generous. The brand is about pausing — the layout should embody that. Use --space-8 (64px) minimum for section padding. --space-10 or --space-12 for hero areas. White space is not empty — it is part of the design.

Motion Principles

- All transitions: --transition-slow (0.8s) — the "Pause" brand feel
- Scroll animations: staggered fade-up on card grids (0.1s delay between cards)
- Stat numbers: count-up animation on scroll via IntersectionObserver
- Cards: translateY(-6px) lift + shadow deepening on hover
- Buttons: letter-spacing expands 0 → 0.05em on hover
- Nav links: animated underline via background-size trick
- ALL animations: prefers-reduced-motion guard is mandatory

Emotional Tone Per Page

Page	Emotional Tone
Home	Wonder and invitation
Creative Learning Programme	Warmth, growth, curiosity

Women Empowerment	Dignity, strength, quiet pride
Podcast	Curiosity, slow conversation
Goppoguro Studio	Craft, creativity, community
Golpoka Club	Adventure, childhood magic, delight
Little Joys	Handmade love, care, connection
Publications	Thoughtfulness, depth, credibility
About Us	Heart, mission, the people behind it all
Gallery	Beauty, documentation, proof of impact
Contact	Welcome, warmth, approachability

Implementation — Follow PRD Phases Exactly

Follow PRD.md Section 9 Implementation Order precisely. Complete Phase 1 fully before starting Phase 2. Complete Phase 2 before Phase 3. Never skip phases — the live site must remain valid at every step.

PHASE 1 Navigation & Structure — Safe Changes First

- Add full dropdown CSS to styles.css (PRD Section 8.1) — .nav__item--dropdown, .nav__dropdown, etc.
- Add initDropdownNav() to script.js — click open/close, Escape close, click outside close, full ArrowDown/Up keyboard nav, ARIA expanded states, only one dropdown open at a time
- Modify highlightActiveNavLink() — activate .nav__dropdown-trigger--active when child is active page
- Modify initMobileNav() — close all dropdowns when mobile menu closes
- Add initContactForm() — pre-fill subject from ?subject= URL query parameter
- Create publications.html — copy blog.html, rename title and content labels, full new nav
- Update nav + footer on ALL 13 pages (existing + new)
- Add redirects to all 6 deprecated files (no 404s)
- Smoke test: verify dropdown on desktop + mobile, active states, redirects

PHASE 2 Content Migration — Enrich Existing Pages

- contact.html — add 3 involvement cards: Volunteer, Work With Us, Start a Studio (from get-involved.html)
- about.html — replace founder section with richer team.html version; add Partners section from partners.html
- creative-studio-network.html — add School Collaboration + Franchise sections from platform.html
- programme.html — update CTAs: partners.html → contact.html, blog.html → publications.html
- When migrating content: tighten writing, add pull-quotes, add visual hierarchy — elevate, don't just move
- Smoke test: click every CTA, confirm no links point to deprecated pages

PHASE 3 New Pages — Build All 5 Net-New HTML Files

women-empowerment.html

The most emotionally important page on the site. Emotional arc: Dignity → Skill → Income → Independence → Community pride.

- Hero: Full-bleed artisan photo, H1 "Made by Hands, Shared by Hearts", dual CTA
- The Story: How the programme started, what it offers (source from index.html makers section)
- How It Works: 3-step cards — Paper & Training → Hand-Folding → Jars Delivered
- Impact Numbers: 4 stat cards with count-up animation (Outfit font, large)
- Pull-quote: representative artisan voice — written with dignity and specificity
- SDG 1 (No Poverty), SDG 5 (Gender Equality), SDG 8 (Decent Work) alignment section
- CTA: "Shop Little Joys" → products.html + "Partner With Us" → contact.html

little-joys.html

Narrative and mission-driven. Distinct from products.html (transactional). Tell the story first.

- Hero: Product photography, H1 "Little Joys", description of the concept

- "What is a Little Joy?" — 2-col: Keep it or pass it on concept
- "The Making" — connect to women artisans, link to women-empowerment.html
- Pull-quote: "There are no right answers here, no timers, no expectations"
- Impact Calculator — embed clone of homepage calculator (reuse same DOM IDs)
- The Collection — 3 product preview cards linking to products.html
- SDG 1, 4, 8, 12 alignment badges
- CTA: "Shop Little Joys" + "Meet the Makers" → women-empowerment.html

golpoka-club.html

Playful, story-like. Target: children 5–12, parents, educators, book retailers.

- Hero: "Coming Soon" badge, playful H1, "Get Notified" CTA
- Meet Golpoka: 2-col character intro with poster image from goppoguro images/
- 6 Adventure Books grid: Toy Town Adventure, Magic City Quest, Haunted Playhouse, Color Treasure Mine, Mystery Forest Mission, Toy Town Adventure II
- How the Club Works: 3 cards — Get the Book → Follow Golpoka → Share Your Adventure
- Notify-me form (unique id="golpoka-notify-form", same initNewsletterForm() pattern)

podcast.html

Concept: slow conversations about creativity, learning, Bangladeshi craft, women artisans, slow living.

- Hero: "Stories Folded in Sound" — strong editorial statement, Coming Soon treatment
- Concept section: what the podcast will explore
- 6 teaser episode cards (invented titles covering origami, education, artisans, play)
- Platform subscribe row: Spotify, Apple Podcasts, YouTube as SVG icon buttons
- Newsletter sign-up (id="podcast-subscribe-form")

publications.html

Renamed and expanded from blog.html. Editorial feel — research, stories, press, zines.

- Featured publication slot at top (large editorial card)
- Category filter bar: All / Research / Stories / Press / Zines
- Existing 5 blog cards upgraded with category tags and excerpt text
- Add 4 more publication cards to feel complete
- Wire initPublicationsFilter() — filter by data-category, animate with opacity transition
- Add initLightbox() to gallery.html

Beauty Requirements — Apply to Every Page

Section Dividers

Replace all plain tags with the origami-fold SVG divider:

```
<div class="section-divider" aria-hidden="true">
<svg viewBox="0 0 1200 20" preserveAspectRatio="none">
<path d="M0,10 L150,0 L300,10 L450,0 L600,10 L750,0 L900,10 L1050,0 L1200,10 L1200,20 L0,20 Z"
fill="var(--color-bg-secondary)"/>
</svg>
</div>
```

Pull-Quotes (at least one per page)

Cormorant Garamond italic, large (clamp 1.4–2rem), left border 3px solid ink color, generous padding, slight background tint. Every page needs at least one pull-quote.

Micro-interactions

- Nav dropdown items: `translateX(4px)` on hover with `--transition-fast`
- All cards: `translateY(-6px)` lift + shadow deepening on hover
- Primary buttons: letter-spacing expands `0 → 0.05em` on hover
- Secondary links: animated underline via background-size trick
- Stat numbers: count-up animation on `IntersectionObserver` scroll trigger

Footer Upgrade

- Logo + tagline — left column
- Quick links: all 8 top-level nav items
- Programme sub-links + Project sub-links
- Social: Facebook SVG icon
- SDG badges row: SDG 1, SDG 4, SDG 8, SDG 12 (simple text badges)
- "Handmade in Bangladesh" credit line + copyright

Absolute Constraints — Never Violated

These rules come from CLAUDE.md and are non-negotiable. Violating any of these breaks the project conventions and will require rework.

Tech Stack	Pure vanilla HTML/CSS/JS — zero frameworks, zero npm, zero build tools. Open any .html directly in browser.
Colors	CSS variables ONLY (--color-*). Never raw hex, rgb, or hsl values in component styles.
Spacing	--space-* variables ONLY (8px grid). Never arbitrary pixel values.
Naming	BEM convention: .block__element and .block--modifier throughout.
Palette	Monochrome-luxury. No bright colors. Ever.
Transitions	Intentionally slow (0.3s–0.8s). The "Pause" brand feel.
HTML	Semantic HTML5 elements: , , , etc.
Motion	prefers-reduced-motion guard on every animation. No exceptions.
Pages	Every page is standalone. Full nav and footer copy-pasted to each file.
JS Guards	All init*() functions guard with if (!element) return; before any DOM access.

Quality Gates — Check Before Each Phase

Before declaring any phase complete, verify every item on this checklist. Do not proceed to the next phase until all gates pass.

Navigation

- Dropdown nav works on desktop (click to open/close)
- Dropdown nav works on mobile (hamburger + accordion)
- Keyboard: Tab, ArrowDown, ArrowUp, Escape all work through dropdown items
- Active state highlights correctly on every page
- Dropdown trigger shows active state when a child page is active
- Mobile menu close also closes all open dropdowns

Code Quality

- Zero hardcoded hex/rgb/hsl colors — only CSS variables
- Zero arbitrary pixel values — only --space-* variables
- All BEM class names follow .block__element and .block--modifier
- All animations have prefers-reduced-motion guard
- All init*() functions guard with if (!element) return;

Content & Links

- All deprecated pages redirect correctly (meta refresh)
- No CTAs pointing to deprecated files anywhere on the site
- All new pages have correct , ,
- Footer is identical on all 13 pages
- Image paths are correct and all images load

Functionality

- initImpactCalculator() works on homepage and little-joys.html
- initContactForm() pre-fills subject from ?subject= URL param
- initPublicationsFilter() filters by category with smooth transition
- initLightbox() opens/closes on gallery.html
- All forms validate client-side (newsletter, contact, golpoka notify-me)
- Canvas hero animation plays on homepage

Accessibility

- All images have descriptive alt text
- Color contrast meets WCAG AA standards
- Dropdown triggers have aria-expanded and aria-haspopup
- Dropdown menus have role="menu" and items have role="menuitem"
- Focus is visible on all interactive elements
- Page tested with keyboard-only navigation

The Vision — What Success Looks Like

When complete, the Goppo Guro website should make a first-time visitor feel the weight and warmth of this mission within 10 seconds of landing. They should understand — without reading a single word — that this is about children, women, paper, and care.

A socially-conscious gift buyer should land on the homepage and feel moved to buy a Little Joy not because it is a beautiful object (it is) but because they understand that buying it puts money in a woman artisan's hands and funds a child's education. The product page should feel like the final step in a journey, not the beginning of one.

An educator should land on the Programme page and immediately understand that Goppo Guro is not a craft class — it is a research-backed learning framework built for Bangladeshi children, aligned with global education goals, and ready to partner with schools.

A journalist or grant writer should land on the About page and find everything they need — the mission, the methodology, the impact numbers, the team, the SDG alignment — presented with the credibility of an organisation that knows exactly what it is doing and why it matters.

This is a small brand with a large heart. Make the website feel exactly that.

Goppo Guro — ■■■■■■ ■■■■■■ — Play, Paper, and Pause
